Education

Software Engineering

2020 - 2025

Academy Of Cryptography Techniques

Major: Software Engineering (2020 – 2025)
Relevant Courses: Mobile Development, Data Structures & Algorithms

Work experience

Backend laravel Intern

Apr 2024 - Jul 2024

CSSoft

- Collaborated with 4+ team members to deliver internal web tools for company use
- Enhanced PHP-based backend systems, reducing page load time by 25%

Android Developer

Jul 2024 - Nov 2024

Ikisoft Company

- Developed a cross-platform medical appointment app (Miuuto) used by 50+ users
- Optimized UI/UX and testing processes, reducing app bugs by 30%

Backend Laravel

Dec 2024 - Aug 2025

Aibat

- Backend Laravel and develop mobile app by Flutter
- Built and maintained APIs supporting system integration and data processing.
- Worked with databases to support system stability and data consistency.

Production Progress / Manufacturing System Staff

09/2025 - 01/2025

KTS Toan Cau Company

- Monitor and update **daily production progress on manufacturing lines** according to production plans
- Track output, **WIP status**, identify potential **schedule delays**, and report issues in a timely manner
- Coordinate with **Production, QA, Warehouse, and Planning teams** to ensure on-time delivery
- Follow up on **sample, trial, and mass production orders**
- Consolidate and prepare production progress reports using **Excel and internal systems**
- Support the operation and continuous improvement of **manufacturing management systems (MES / internal systems)**
- Participate in **root cause analysis** for production delays and propose improvement solutions
- Act as a **bridge between Production and IT teams** to resolve system-related issues and ensure stable operations

Fullstack web developer

Tosy Robotics Company

02/2026 - Present

- Developing fullstack web applications using **Laravel, MySQL, JavaScript**
- Building and maintaining RESTful APIs for frontend and system integration
- Implementing UI and improving user experience
- Working with internal systems and optimizing performance
- Collaborating with cross-functional teams to deliver scalable solutions

Project experience

📈 Graduation Project – LeeHaMedical
⭐ Score: 8.5/10

- Built an online medical appointment system integrating AI chatbot and Stringee API
- Delivered features including online payment, video consultation, and smart medication reminders...
- Tech: Java, Android, PHP, MySQL, Firebase, RESTful API
- Responsibilities:
  - Designed and developed Android app with reminders and notifications, reducing missed appointments by 30%
  - Implemented backend APIs (auth, appointment) with secure token-based auth
  - Constructed responsive website using PHP & Bootstrap for doctor-patient interaction
  - Designed API-based data exchange similar to B2B integration model between web and mobile platforms
- GitHub: github.com/lephiha/do_an_tot_nghiep

🗓️ Appointment Scheduling App – SelfCare
⭐ Score: 8/10

- Role: Backend | Frontend | API
- Tech: Java, Android, Firebase, phpMyAdmin
- Built Android app for appointment scheduling with user authentication and notifications
- Reduced scheduling errors by 40% through automated calendar sync
- GitHub: github.com/lephiha/Self-Care-App

💸 Personal Finance App – Manage Money
⭐ Score: 8/10

- Role: Team Leader | Backend | Frontend
- Tech: Java, SQLite
- Designed and built mobile app for managing income/expenses with visual analytics
- Helped users track and reduce overspending, averaging 15% savings
- GitHub: github.com/lephiha/app_manage_money

☕ Coffee Shop App

- Role: Android Developer
- Tech: Kotlin, Firebase
- Built a fully functional coffee shop app with product listings, order placement, and Firebase real-time database integration
- Minimized manual order errors by 50% through real-time backend features
- GitHub: github.com/lephiha/coffee_shop_app

Carreer Objective

Production Progress / IT System-oriented Engineer with hands-on experience in manufacturing environments, focusing on production progress control, system support, and data-driven operations.
Short-term goal:
Strengthen skills in production planning, manufacturing progress

Skills

Production & Manufacturing

- Production progress tracking
- Coordination between production, QA, warehouse
- Sample / pilot / mass production follow-up
- Reporting & data analysis (Excel)

IT & System Support

Tools

- Microsoft Excel, Word
- Internal production management systems
- Git, Postman
- Basic understanding of ERP / MES workflows

Certifications

control, MES/ERP systems, and data analysis to support factory operations and on-time delivery.

Long-term goal:

- Develop into a **MES / ERP / Production System Engineer** or **Manufacturing IT Executive**, contributing to stable production systems and cross-department efficiency.

IT & System Support

- Backend systems (PHP Laravel, API)
- Manufacturing system support (MES / internal tools)
- Database handling (MySQL, SQLite)

Manufacturing Systems & IT

- MES / internal manufacturing system support
- System incident handling and user support in factory environment
- API-based system integration and data exchange
- Database handling (MySQL, SQLite) for production-related data
